LIST OF EXPERIMENTS (INDEX)

S.NO	EXPERIMENT NAME	DATE	SIGN
1	Write a Java program to identify Class & Object.		
2	Write a Java program to display a welcome message and understand compilation & execution.		
3	Write a Java program to demonstrate reading an integer value from the user at run time using nextInt().		
4	Write a Java program to read a full line of text including spaces, using nextLine().		
5	Write a Java program to prompt to enter user name and age at run time. The object s1 stores and displays the data.		
6	Write a Java program to perform arithmetic operations on two numbers.		
7	Write a Java program to accept and display user input using the Scanner class.		
8	Write a Java program to accept numbers through command-line arguments and calculate their sum.		
9	Write a Java program to print number and star patterns using nested loops.		
10	Write a Java program to sort array elements in ascending and descending order.		
11	Write a Java program to create an Employee class with data members and member methods.		
12	Write a Java program to demonstrate the use of the this keyword, static variables, static methods and static blocks.		
13	Write a Java program to demonstrate default, parameterized constructors & constructor overloading using different parameter lists.		
14	Write a Java program to perform string comparison, concatenation and substring operations using String class.		
15	Write a Java program to demonstrate append, insert, replace, delete and reverse operations using StringBuffer.		
16	Write a Java program to perform mutable string operations using StringBuilder.		
17	Write a Java program to demonstrate compile-time polymorphism using method overloading.		
18	Write a Java program to demonstrate runtime polymorphism using method overriding.		
19	Write a Java program to demonstrate multilevel inheritance using Employee and Manager classes.		
20	Write a Java program to demonstrate the use of the super keyword for variables, methods and constructors.		
21	Write a Java program to calculate the area of different shapes using an abstract class.		
22	Write a Java program to demonstrate multiple inheritance using interfaces.		
23	Write a Java program to handle ArithmeticException and ArrayIndexOutOfBoundsException.		
24	Write a Java program to handle multiple exceptions using multiple catch blocks.		
25	Write a Java program to demonstrate resource cleanup using the finally block.		
26	Write a Java program to explicitly generate an exception using the throw keyword.		

S.NO	EXPERIMENT NAME	DATE	SIGN
27	Write a Java program to demonstrate exception propagation using the throws keyword.		
28	Write a Java program to create and execute a thread by extending the Thread class.		
29	Develop a Student Result Management System to calculate total marks, percentage, and grade.
